January—June 1950, Inclusive

EAST ENGIN. LIBRARY

TN 1 M58

Feature editorial matter from Volume 31 of MATERIALS & METHODS covering issues from January through June 1950 is indexed here. Material covered in the index includes feature articles, MATERIALS & METHODS Manuals, and Engineering File Facts.

Alloy Steel Permits Weight Saving in Structural Parts, Strong Ductile—May, p. 70
Aluminum Alloy Offers High As-Cast Properties, New—June, p. 61
Aluminum Alloys Improved by Re-Solution Treatment, Formability of Strong—Feb., p. 60
Aluminum Alloys, Wrought Non-Heat-Treatable (Engineering File Facts)—Mar., p. 83

Aluminum and Its Alloys:
- Aluminum Alloy Offers High As-Cast Properties, New—June, p. 61
- Aluminum Alloys Improved by Re-Solution Treatment, Formability of Strong—Feb., p. 60
- Aluminum Alloys, Wrought Non-Heat-Treatable (Engineering File Facts)—Mar., p. 83
- Aluminum and Stainless Steel Joined by New Inert-Gas Shielded Metal Arc Welding—Jan., p. 53
- Chemical Polishing Process, Nonferrous Metals Given High Finish by—Jan., p. 59
- Materials Supplies and Prices, Outlook in 1950 Optimistic for—Jan., p. 47
- Review of Materials Engineering Developments in 1949 (MATERIALS & METHODS Manual)—Jan., p. 69

Aluminum and Stainless Steel Joined by New Inert-Gas Shielded Metal Arc Welding—Jan., p. 53
Beryllium Copper (MATERIALS & METHODS Manual)—Apr., p. 75
Blast Cleaning Metals, Soft Grits Provide Low Cost Method for—May, p. 67

Brazing (see Welding)
Brazing and Soldering of Metals Accomplished by Induction Heating Methods—June, p. 63
Carbonitriding of Steel Accomplished in Automatic Furnace, Bright—Mar., p. 61
Carburizing Pastes Permit Fast Low-Cost Selective Hardening—Apr., p. 72

Castings and Casting:
- Gray Iron Preferred for Large, Heavy Duty Crankshafts—June, p. 69
- Nodular Gray Iron Compared with Other Cast Ferrous Metals—Apr., p. 51
- Nonferrous Hot Die Pressings, The Case for—Feb., p. 65
- Plating Zinc-Base Die Castings, Methods of—Mar., p. 53
- Review of Materials Engineering Developments in 1949 (MATERIALS & METHODS Manual) Jan., p. 69

Chemical Polishing Process, Nonferrous Metals Given High Finish by—Jan. p. 59

Cleaning and Finishing:
- Blast Cleaning Metals, Soft Grits Provide Low Cost Method for—May, p. 67
- Galvanized Steel Retains Corrosion Resistance after Forming, Deep Drawing—Feb., p. 63
- Metal Powder Parts Successfully Plated by New Process—June, p. 54
- Plating Zinc-Base Die Castings, Methods of—Mar., p. 53
- Salt Bath Cuts Steel Processing Costs, Dual-Purpose—Jan., p. 62

Coatings and Finishes:
- Chemical Polishing Process, Nonferrous Metals Given High Finish by—Jan., p. 59
- Porcelain Enamels (MATERIALS & METHODS Manual)—Feb., p. 71
- Review of Materials Engineering Developments in 1949 (MATERIALS & METHODS Manual)—Jan., p. 69
- Sprayed Metal Coatings Improve Corrosion Resistance of Wide Range of Products—Apr., p. 67
- Synthetic Resin Finishes, What to Expect from—Mar., p. 66

Cold and Hot Molding Materials, Coil Designs Improved by Use of—May, p. 73
Copper-Base Alloys Combine High Strength with High Conductivity, New—Jan., p. 64

Copper, Brass and Bronze:
- Beryllium Copper (MATERIALS & METHODS Manual)—Apr., p. 75
- Chemical Polishing Process, Nonferrous Metals Given High Finish by—Jan., p. 59
- Copper-Base Alloys Combine High Strength with High Conductivity, New—Jan., p. 64
- Coppers and Plain Brasses, Wrought (Engineering File Facts)—May, pp. 99, 101
- Copper Welded by Inert-Gas-Shielded Arc Process, Heavy Gage—Feb., p. 57
- Materials Supplies and Prices, Outlook in 1950 Optimistic for—Jan., p. 47
- Phosphor Bronzes, Wrought (Engineering File Facts)—Apr., p. 91
- Powder Metallurgy, Designing Structural Parts for—Apr., p. 56
- Review of Materials Engineering Developments in 1949 (MATERIALS & METHODS Manual)—Jan., p. 69

Coppers and Plain Brasses, Wrought (Engineering File Facts)—May, pp. 99, 101
Copper Welded by Inert-Gas-Shielded Arc Process, Heavy Gage—Feb., p. 57

Corrosion:
- Galvanic Corrosion—What It Is and How It Can Be Avoided—Feb., p. 49
- Indium-Bearing Solders Have Improved Alkali Resistance, New—Mar., p. 59

Engineering File Facts:
- Aluminum Alloys, Wrought Non-Heat-Treatable—Mar., p. 83
- Coppers and Plain Brasses, Wrought—May, pp. 99, 101
- Heat Treating Stainless Steels, Problems and Remedies—Jan., p. 81
- Metal Plate Deposits, Identification of—Jan., p. 83
- Nickel Steels—Feb., pp. 83, 85
- Phosphor Bronzes, Wrought—Apr., p. 91
- Selecting Rubber Compounds and Processing Methods—June, pp. 83, 85
- Steels Commonly Used for Plastic Molds, Properties of—Mar., p. 81
- Thermosetting Plastics, Long Time Strength of—Apr., p. 93

Fabricated Forms and Parts:
- Nonferrous Hot Die Pressings, The Case for—Feb., p. 65
- Plastics vs. Metals in Engineering Applications—Mar., p. 49
- Review of Materials Engineering Developments in 1949 (MATERIALS & METHODS Manual)—Jan., p. 69
- Stainless Steel Used for Cold Headed and Upset Parts, New—Feb., p. 59
- Wire as an Engineering Material (MATERIALS & METHODS Manual)—June, p. 75

Fibrous Materials Suited for Many Engineering Uses, New—May, p. 64

Forming:
- Aluminum Alloys Improved by Re-Solution Treatment, Formability of Strong—Feb., p. 60
- Hot Extrusion Process, Complex Steel Parts Produced by—Mar., p. 56
- Review of Materials Engineering Developments in 1949 (MATERIALS & METHODS Manual)—Jan. p. 69

Galvanic Corrosion—What It Is and How It Can Be Avoided—Feb., p. 49
Galvanized Steel Retains Corrosion Resistance after Forming, Deep Drawing—Feb., p. 63
Gas Pressure Welding, Joining Large Sections of Low Alloy Steels—Apr., p. 60
Gears of Different Materials Finished without Tooling Change—May, p. 79
Gray Iron Preferred for Large, Heavy Duty Crankshafts—June, p. 69
Hard Rubber as an Engineering Material—Feb., p. 54

Heating and Heat Treatment:
- Aluminum Alloys Improved by Re-Solution Treatment, Formability of Strong—Feb., p. 60
- Carbonitriding of Steel Accomplished in Automatic Furnace, Bright—Mar., p. 61
- Carburizing Pastes Permit Fast Low-Cost Selective Hardening—Apr., p. 72
- Heat Treating Stainless Steels, Problems and Remedies (Engineering File Facts)—Jan., p. 81
- Review of Materials Engineering Developments in 1949 (MATERIALS & METHODS Manual)—Jan., p. 69
- Salt Bath Cuts Steel Processing Costs, Dual-Purpose—Jan., p. 62
- Steels and Heat Treatments for Automotive Gears—June, p. 57

Heat Treating Stainless Steels, Problems and Remedies (Engineering File Facts)—Jan. p. 81
Hot Extrusion Process, Complex Steel Parts Produced by—Mar., p. 56
Indium-Bearing Solders Have Improved Alkali Resistance, New—Mar., p. 59

Irons:
- Gray Iron Preferred for Large, Heavy Duty Crankshafts—June, p. 69
- Nodular Gray Iron Compared with Other Cast Ferrous Metals—Apr., p. 51
- Powder Metallurgy, Designing Structural Parts for—Apr., p. 56
- Review of Materials Engineering Developments in 1949 (MATERIALS & METHODS Manual)—Jan., p. 69

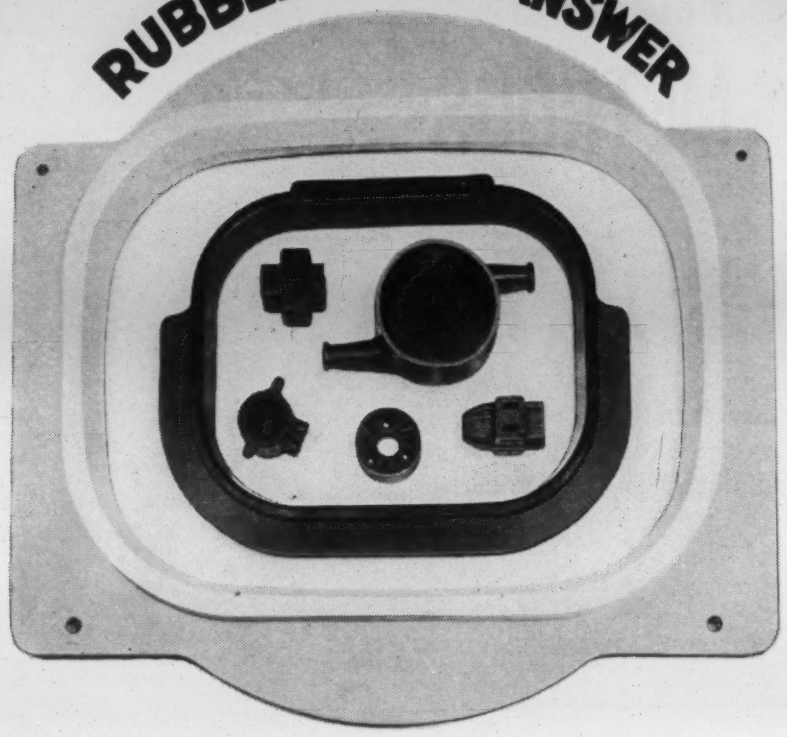
Machining and Machined Parts:
- Gears of Different Materials Finished without Tooling Change—May, p. 79
- Nonferrous Hot Die Pressings, The Case for—Feb., p. 65
- Review of Materials Engineering Developments in 1949 (MATERIALS & METHODS Manual)—Jan., p. 69
- Steels Offer High Machinability Rates, Three New—Jan., p. 51

Manuals, Materials & Methods:
- Beryllium Copper—Apr., p. 75
- Porcelain Enamels—Feb., p. 71
- Review of Materials Engineering Developments in 1949—Jan., p. 69
- Stainless Steels—Their Selection and Application—May, p. 83
- Thermoplastics, The—Mar., p. 69
- Wire as an Engineering Material—June, p. 75

Materials Data Sheets:
- Aluminum Alloys, Wrought Non-Heat-Treatable (Engineering File Facts)—Mar., p. 83
- Coppers and Plain Brasses, Wrought (Engineering File Facts)—May, pp. 99, 101
- Nickel Steels (Engineering File Facts)—Feb., pp. 83, 85

(Continued on page 155)

RUBBER IS THE ANSWER



Performing faultlessly in former trouble spots, Acushnet precision-molded rubber parts have proven to be the answer to many application problems. Advanced techniques in compounding synthetic and natural rubbers, skilful designing and mold-making enable Acushnet to produce parts that meet your special requirements. Our engineers will gladly collaborate with your designers or make separate recommendations.

Here's the Flexible Hose that
HANDLES TOUGH SOLVENTS!

The compar tube in Resistoflex Hose withstands continuous contact with aromatic and chlorinated hydrocarbons

A compar tube in Resistoflex hose not only contributes toughness, tensile strength and flexibility, but also renders the hose *impervious* to many chemicals*, solvents, oils and gases which permeate or attack other flexible materials. For example, compar is completely unaffected by:

Benzene Hexachloride . . . Carbon Tetrachloride . . . "Freons" . . . Ether . . . Carbon Disulphide . . . "Parathion" . . . Toluene . . . Perchlorethylene . . . Trichlorethylene . . . Styrene Monomer . . . "Chlordane" . . . Dibutyl Phthalate . . . and others.

*Not recommended for water, or water soluble materials in appreciable concentrations.

If flexibility, light weight, ease of handling, and solvent resistance in a line can solve your problem—Resistoflex hose may be your answer. Sizes up to 1½ inch I.D., available in bulk or with fittings. Write us about it today.

RESISTOFLEX
CORPORATION
Belleville 9, New Jersey
SYNTHETIC FLEXIBLE PRODUCTS AND PARTS FOR INDUSTRY

East and Midwest, 2 modern
ALCOA PLANTS MAKE the best ALUMINUM DIE CASTINGS
you can buy

Your phone book lists the nearest Alcoa sales office under "aluminum". For prompt quotation, technical books and help based on 62 years of aluminum knowledge . . . call there or write ALUMINUM COMPANY OF AMERICA, 1898F Gulf Building, Pittsburgh 19, Pa.

ALCOA *Aluminum* DIE CASTINGS

★

To help you select the right porcelain for your job.

"A Brief Survey . . ." gives you detailed information on our large variety of moulded ceramics for resistance to electricity, heat, moisture, chemicals and weathering agents encountered in widely varied industries. Our technicians have prepared this booklet to help solve your materiel problems and to show you many economical methods of porcelain and ceramic applications.
